

StemGuard AHS Automatic Hand Sanitiser

Automatic entry control ensuring
hand sanitising before access

Studies show that 80% of infectious diseases are spread by touch, and that infection can last on hard surfaces for several days. Door handles are a breeding ground for germs, and indeed, scientists have confirmed that the Coronavirus (COVID-19) can survive on door handles for up to NINE DAYS.

StemGuard AHS is an innovative solution utilising the new Clarisafe unit to bring you an automatic hand sanitising system that guarantees that nobody can enter the workplace without sanitising their hands.

The unit will only allow access after the individual's hands have been sanitised by sending a signal to the access control system.

✓ Simple

Rapidly doses both sides of both hands

✓ Guaranteed

No cleansing = No entry

✓ Fast

Can process 30 people per minute

✓ Visual guidance

Clear, simple guidance for ease of use

✓ Multiple Applications

Can be used in commercial, leisure, healthcare and education sectors

✓ Affordable

Reduced sick days ensures fast payback... a Clarisafe user reported a drop from 2.2% - 0.5% in absenteeism
